Description			
<p>This is feature request to improve usability from experience with RC 4.2.1.</p> <p>In PR or PR comment notification of rhodecode itself, we can find URL to PR comment in PR but it is not direct link, so we need to manually copy and paste the URL in browser to jump to comment page. this procedure is hassle for users.</p> <p>If we have direct link in notification itself we can easily jump to PR page and verify comments etc.</p>			

History

#1 - 19.08.2016 12:35 - Tomoyuki Harada

Upgraded to 4.3.0 and found that url for PR comment and its repository in notification is direct link.

This is what I have requested and it is OK for me to close this ticket.

Thanks.
