Description			
We need to start moving the code back to pyramid. We should start with making routes work only in PYRAMID, if that's possible.			
<ul style="list-style-type: none">• need to investigate if we can make it work• we should have a one common place to define those like we had before• can we support pylons DELETE/PUT fake request mapping, or should we re-do all the routes not to use them (it's really a POST faked by special parameter to mimic DELETE/PUT)			
Subtasks:			
Task # 4214: Remove all Pylons DELETE/PUT/UPDATE calls			Closed

History

#1 - 22.08.2016 12:27 - Daniel D

One issue with moving urls to pyramid is that generating urls for tests can't use the url generator.

You can't use `request.route_path('someroute')` unless there is a request context - which means the tests would have to be done as:

```
url = ADMIN_PREFIX + '/some/route/' + str(id)
```

vs

```
url = request.route_path('someroute', id=id)
```

Although this might be good in actually finding route changing mistakes.

#2 - 02.09.2016 08:48 - Daniel D

We can add middleware to support the fake `_method` arg, but it's a better idea to use POST/GET's for everything, since web browsers only support that and the endpoints are not actually REST in the end.

Yes, firstly we should remove all DELETE/UPDATE/PUT fake calls.

- probably already needs route changing and matching

as for ADMIN prefix, there for sure must be a way to generate urls for tests.
