Description

Based on this thread: <https://community.rhodecode.com/t/cloning-problem-over-ssl/49/12>

Lots of people report that there are some SSL problems. We should check this out.
I'm suspecting python bump caused this, but we should check, and propose a workaroud ?

Things to check:

- is it nix related
- is it a real regression from 3.X
- was this python 2.7.X bump
- could we make a simple workaround addind some SSL certificate flags etc.

I believe we got this sorted by addind the new SSL flag to control, at least it was confirmed working by 1 user.
