Description

[tenderapp] report: <https://rhodecode.tenderapp.com/help/discussions/problems/9626> reported by user: gildas.fargeas@nerd.nintendo.com

Hi,

i've noticed this small bug in the template you use for mod_dav_svn.conf. When the HTTP[S] authentication realm (set up in global settings page) is using multiple words separated with a space, the mod_dav_svn.conf file does not quote the name in the configuration resulting in an apache crash.

Additionally, when using special characters there, these are converted to html so you should make sure the resulting string is not causing a potential error (or forbid special characters in the text input :).

I've quick-fixed it by quoting the `#{rhodecode_realm}` in the mako template located in `/opt/rhodecode/store/bc6w8dzvdc6dixi83cs32rbaj5zyz67-python2.7-rhodecode-enterprise-ce-4.4.0/lib/python2.7/site-packages/rhodecode/svn_support/templates/mod-dav-svn.conf.mako`

That's it.
