### Description

When creating a new repository group and a new repository under that group, it is not available via an SVN connection until the apache2 service is reloaded/restarted. The group creation successfully updates the apache configuration file as outlined here: https://docs.rhodecode.com/RhodeCode-Enterprise/release-notes/release-notes-4.3.0.html?highlight=svn, but apache2 does not load the updated file until a reload/restart is issued. Can the server also reload the apache2 configuration when this file is changed?

## History

#### #1 - 11.10.2016 11:00 - Marcin Kuzminski [CTO]

*- Target version changed from v4.4 to v4.5*

Hi Bert,

Yes this is a good improvement.

The plan should be:

- add a new option called svn.proxy.reload_cmd
- if that option is set execute it after generating the config
- then users can set something like svn.proxy.reload_cmd = /etc/init.d/apache2 reload

we should make sure all error are nicely propagated to the logs from calling this command. That should allow to have a fully automated setup when handling subgroups in apache.

#### #3 - 12.10.2016 11:57 - Marcin Kuzminski [CTO]

Note: as we discussed. Also a case when there's a new setup, and people don't add any repository groups can lead to template file not beeing created. We should expose a button in svn2apache config that allows to trigger an event, and create the generated file for use in SVN.
