Description

<https://docs.rhodecode.com/RhodeCode-Enterprise/install/install-steps.html> only lists

- Set up Email
- Make Database Changes
- Install Celery
- Migrating repositories

Yet web access that isn't localhost is essential for RhodeCode to function.

History

If you setup the listen address at 0.0.0.0 then webserver isn't mandatory. During installation we also list this 127.0.0.1 required webserver vs 0.0.0.0

In fact lot of our users don't use it.

We try to use the minimalistic setup, i think we should mention the webserver, but not make it mandatory because it isn't
