Description

Hello,
Updated my RC from 4.10.1 to 4.12.4, and now, when doing pull-request, and adding the reviewers, so clicking on pull-request, I get this:

```
"Error creating pull request: review_members: Errors: rules: Missing value"
```

Obs:seems like there is no rule for reviewer, but I cannot change due to community version

What do I do?!

Thanks

Hi,

Did you somehow migrated/switched from EE into CE edition?

We're not sure how you got to this state, however, maybe try clearing out following DB tables:

```
repo_review_rules_users
```

```
repo_review_rules_users_groups
```

```
repo_review_rules
```

#2 - 18.07.2018 23:47 - Igor Pinotti

Hello Marcin,

I downloaded the windows version (VM ready), installed and switched to COMMUNITY. After using for a little while with repositories and branches, updated to 4.12.4, and the problem arises!

Can you describe how do I clean those tables?

Thank you

Please try this:

```
rccontrol ishell community-1
```

(or other instance-id if it's called e.g community-2)

In the Ishell run following commands:

```
RepoReviewRuleUserGroup.query().delete()  
RepoReviewRuleUser.query().delete()  
RepoReviewRule.query().delete()  
Session().commit()
```

#4 - 19.07.2018 00:05 - Igor Pinotti

Did the following commands, but nothing happened!

Each delete command returned 0!

RepoReviewRule.query().delete()  
Session().commit()
```

#5 - 19.07.2018 00:05 - Igor Pinotti

And the behavior about the pull-request is the same

#6 - 19.07.2018 02:38 - Marcin Kuzminski [staff]

can you describe exactly what you do on this PR? in terms of reviewers ?

#7 - 19.07.2018 14:50 - Igor Pinotti

Just regular procedure! I have a main repository, and every developer forks from this repository! So they commit work to their own forked repository and do a pull request to merge into the main repository! Open the PR, select the branch to merge, add the reviewers, and simply click on PULL REQUEST! After that, a flash message appear on the top of the screen saying: "Error creating pull request: review_members: Errors: rules: Missing value".

Did a test just clicking on pull request, without any reviewer added, and the PR is created! Don't know why!

Never worked with the enterprise version before on this machine! As soon as I had installed the VM, first thing I did was change to COMMUNITY! Worked on this version for a while, and then upgraded to 4.12.4! So the problem arise!

Any news about this?

Hi,

I'm sorry we don't know what could be the problem. This wasn't reported by anyway else, and we don't have the capacity to dig into this problem right now. Maybe try a fresh installation instead?

Best,

#10 - 23.07.2018 15:59 - Igor Pinotti

I see! And there is a way to migrate everything to a new instalation easily, or maybe create a new instance community-2 with the SW updated?

Another problem that I have, that maybe on the newer version is correct, is the timezone, I've just setted the corret time on Linux, but the rhocode uses another stuff and there is no option to correct! I am on timezone -3!

Thank you
