<b>Target version:</b>	v4.16	<b>Spent time:</b>	0.00 hour
<b>Sorting:</b>		<b>Affected Version:</b>	
<b>Commit Number:</b>			

#### Description

Currently API returns something like this:

```
{
  "result": {
    "merge_ref": {
      "name": "pr-merge",
      "type": "book",
      "commit_id": "xxxxx"
    },
    "merge_commit_id": "xxxxx", //(same value as the commit_id)
    "executed": false,
    "possible": true,
    "failure_reason": 3
  },
  "id": "mergepr",
  "error": null
}
```

"failure\_reason": 3 is cryptic, we have a translation layer for that already, so we just need to expose failure\_reason\_explanation and read it !
