

RhodeCode CE/EE - Bug #5530

Email integration has incorrect url

07.02.2019 00:31 - lee loucks

Description

The two urls in the email from the Email Integration contain the wrong scheme. Both the changeset URL and the "notification from RhodeCode" start with <http://hostname/subdir> where they should start with <https://hostname/subdir>.

The `subdir` was set according to the [docs](#).

On the [Admin/Settings/System Info](#) the `RhodeCode Base URL` shows <https://hostname>

I believe this could be related to using HTTPS and having your proxy send some improper headers and RhodeCode doesn't know about HTTP usage.

Can you try setting in `rhodecode.ini` a setting:

```
force_https = true
```

restart the server and try again?

Thanks that seems to have done the trick.

You can close this ticket.
