Description

At the origin, the user was prompted to change his password when logged in. But he is a LDAP user, so he should not be asked to change his password.
so I've deleted the user. But then when I tries to logon again using his credentials, I have this "500 Internal Server Error".
But the server is still running fine.

Hi Thierry,

can you check the logs for exceptions ?

Alternatively, if you use version 4.15 or later, you can check exception tracker available from the admin menu.

Best,
