Description

coming here <https://issues.rhodecode.com/issues> gives me:

Firefox detected an issue and did not continue to issues.rhodecode.com. The website is either misconfigured or your computer clock is set to the wrong time.

It's likely the website's certificate is expired, which prevents Firefox from connecting securely.

What can you do about it?

issues.rhodecode.com has a security policy called HTTP Strict Transport Security (HSTS), which means that Firefox can only connect to it securely. You can't add an exception to visit this site.

Your computer clock is set to 10/25/2019. Make sure your computer is set to the correct date, time, and time zone in your system settings, and then refresh issues.rhodecode.com.

If your clock is already set to the right time, the website is likely misconfigured, and there is nothing you can do to resolve the issue. You can notify the website's administrator about the problem.

and

Websites prove their identity via certificates, which are valid for a set time period. The certificate for issues.rhodecode.com expired on 10/24/2019.

Error code: SEC_ERROR_EXPIRED_CERTIFICATE
