#### Description

Hello,  
since last update (4.17.4 CE) the base url in integration email notification has changed in notification from RhodeCode. <http://rhodecode.local>

So in the email, the link to specific commits is something like:

[http://rhodecode.local/\[...\]/changeset/1d7d6e009687c7317af54afbecf20a05ba5c87ae](http://rhodecode.local/[...]/changeset/1d7d6e009687c7317af54afbecf20a05ba5c87ae)

I did not found any configuration about that searching in rhodecode.ini, system settings interface or even postgresql.

thanks.  
alessandro

#### History

Hi Alessandro,

The setting for this is follwing variable in rhodecode.ini

```
## URL at which the application is running. This is used for bootstraping
## requests in context when no web request is available. Used in ishell, or
## SSH calls. Set this for events to receive proper url for SSH calls.
app.base_url = http://rhodecode.local
```

##### #2 - 21.11.2019 11:28 - Alessandro Ceglie

Thanks for the immediate feedback.  
It actually works!

I'm trying to understand why this entire section was totally missing in my rhodecode.ini

by the way,  
solved.

thanks,  
alessandro.
