Description			
RhodeCode already provides information about the current repository, group and user for in-process hooks. We have a hook for mercurial but it is not possible to use it as a in-process hook because it uses rbttools (which uses hg binary). So please add the same information to external hooks, too. https://github.com/misery/ExtendedApproval/blob/master/contrib/mercurial_push.py

Hi,

Can you explain a bit more what information you need for external hooks ? It's a bit unclear what additional information you'll need for the call hooks.

Cheers

#2 - 05.12.2019 13:46 - A. Klitzing

We already talked about it last month or so. RhodeCode provides an environment variable with all needed information. But it's for in-process hooks only.

- Username
- Full path to repository (group)
- Name of repository

Hi there,

I tried today to add those information to my external Mercurial hook. But I don't see any new data.

What did you added? There is no additional environment variable.
