| Description | |
| Consider this issue tracker pattern rule: | |
| Pattern: <code>(?i)\b(?:P(ABC DEF)-\d+)\b</code> | |
| Url: https://jira.mycompany.com/browse/\${issue_id} | |
| The pattern correctly matches "abc-123" and creates the correct link, but the text rendered is "abc-123abc". | |
| It seems that the combination of a named group and an anonymous capturing group causes this problem. If I make the group non-capturable, it fixes the rendering: | |
| Pattern: <code>(?i)\b(?:P(?:ABC DEF)-\d+)\b</code> | |
| Url: https://jira.mycompany.com/browse/\${issue_id} | |
