Description			
<p>Due to https://issues.rhodecode.com/issues/5602 ability to copy "File Path" is very good. But is there any chance to add new button "Full path"</p> <p>Something like this:</p> <p>Registry URL:</p> <pre>http://example.com/</pre> <p>Repository path:</p> <pre>/repositry_group_1/repository_sub_group/repository</pre> <p>File path:</p> <pre>/branches/develop/xxx/yyy/file.txt</pre> <p>Full path:</p> <pre>http://example.com/repositry_group_1/repository_sub_group/repository/branches/develop/xxx/yyy/file.txt</pre> <p>===== =====</p> <p>This will be very helpful for svn repositories due to structure:</p> <pre>/branches/* /trunk /tags</pre> <p>When you enter http://example.com/repositry_group_1/repository_sub_group/repository/branches/develop/ and want to copy that path for svn checkout</p>
