**Description**

Hello,

when adding a comment in a review and the comment contains a code block and the code block contains a @, i get a broken code block. E.g.

```
due to redmine formatting,  
I leave one ` out below. you should add a open  
and closing ` if you test this
```

```
``python  
@classmethod  
def foo():  
    return  
``
```

will give me something along the lines of:

```
my comment test, which appears normal  
python<string class="tooltip-hovercard" data-hovercard.... url="pyroutes.url(... @classmethod....
```
