

RhodeCode CE/EE - Bug #5664

Regression: When assigning permissions, cannot see own group in auto-complete without special conditions

Description

Previously, if you are in group "A", and you own a project. When you try to assign permissions to project, group "A" is available for auto-complete.

Now, if you are not super-admin, do not have at least "Read" access to the group from some other group you also belong to, then when you try to assign your own group to a project, you will notice it is not available for selection at all in auto-complete. And it will clear itself out when you try to type the exact name before saving.

If the group owner tries to assign permission "Read" to its own group, the user gets an error message saying cannot assign group permission to the same group.

Right now, we are using workaround to use 2 groups instead of one for each group that can own a project, and we will have to manually add user of one group to its duplicate group when new users are added. Then with Group "B", I can assign "Read" to group "A", and if group "B" contains all members of group A, all members will now be able to add group A to the project.

Affected Version: 4.25.2 (not available for selection in this bug report page)

Hi Yechen,

Could you provide a bit more examples with screenshots from RhodeCode ? We're uncertain if we understand the problem completely

#2 - 28.07.2021 15:55 - Yechen Qiao

Permissions
Advanced
Global permissions
Permissions summary

Testing_Two - Access Permissions

None	Read	Write	Admin	User/User Group	
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	aschooler_admin (super-admin)	
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	bdeamer_admin (super-admin)	
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	sapio_internal_system_admin (super-admin)	
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	yqiao_admin (super-admin) (owner)	
<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	default - permission for other logged in users	
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	yqiao_admin (inactive duplicate)	Remove
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	yqiao	Remove
					Add user/user group

Save Reset

In this screen, I as admin user, added my regular user in group "Testing_Two"

○ ● ○ ○ [Add user/user group](#)

However, when I try to add this group to repo, it does not appear in auto-complete. So it auto-clears out when I hit enter.

On further investigation, it seems if I rename the group to "Testing" without underscore, this works. So perhaps it's the underscore that broke it?

#3 - 29.07.2021 10:49 - Marcin Kuzminski [CTO]

Hi,

So actually we've identified this is a permission cache problem. When someone creates a new user group the cache for permissions is invalidated for this person only, so others won't see this user group. The rename invalidates cache for all that have read permissions so that's why you see this group then.

We're going to fix this on the next release asap.
