

RhodeCode CE/EE - Bug #5672

Unable to browse git repository folders with # in names

16.12.2021 16:00 - Greg Gaskill

Status:	New	Start date:	16.12.2021
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	v4.26	Spent time:	0.00 hour
Sorting:		Affected Version:	v4.24
Commit Number:			

Description

When browsing a git repository on our Rhodecode EE server web gui, we are unable to descend into folder whose names contain a # symbol.

An example browsing URI:

```
https://example.com/projects/vendor/site/jobname/files/tip/Code/CP3%231?at=tip
```

Example error text for the above message says:

```
error: There is no file nor directory at the given path: `Code/CP3` at commit xxxx
```

The actual folder name in the repository is "Code/CP#3"

Also note the actual rhodecode version running is 4.26 , not 4.24 (but the options didn't allow me to specify it)

History

#1 - 16.12.2021 17:31 - Marcin Kuzminski [CTO]

- Target version changed from v4.24 to v4.26

Confirmed.

We're working on a new release now and will fix it asap. We can provide a patch if this is urgent for you on top of 4.26.0

#2 - 16.12.2021 18:13 - Greg Gaskill

Not an urgent issue here, we can still pull the repository and look at things that way.
